SPECIFICATION FOR MEDICAL DEVICES

Description of the item

Adult non heated circuits

Type: Adult non heated circuits

Purpose:

Adult non-heated ventilator circuits are medical devices that deliver air to a patient's lungs from a ventilator without the use of a heating element. They are commonly used in emergency and transport situations, as well as for patients who can tolerate dry air. These circuits typically consist of corrugated tubing, connectors, and may include water traps for condensation and filters. Clear in colour. Material: Medical-grade, latex-free materials for patient safety.
